

Fast & Reliable SASE Solutions

Legacy WAN infrastructure requires private lines and proprietary single-function hardware to deploy. When more branches are established, the complexity of network management increases as well as the hardware investment and total cost of ownership.

Lanner and Versa Networks have tested and validated an integrated solution that combines Lanner's uCPE platforms and Versa Networks' highly-flexible SASE Solution.

tom_fong@lannerinc.com

The joint solution leads the way for a digital first organization to be able to transform their network edge with secure, scalable, and reliable enterprise-wide networking increasing multi-cloud application performance and dramatically driving down costs

Versa SASE

Versa enables a range of typical WAN Edge use cases including the Software-Defined Branch, Secure SD-WAN, Routing, and Security.

Secure SD-WAN

Versa Secure SD-WAN delivers differentiated service across enterprise, service provider, mid-market and small-medium businesses.

Security

Versa Security increases protection for your on-premises, branch, or cloud applications and simplifies the interoperability of security and networking.

Routing

Versa Networks offers a unique approach to routing with a virtual solution that can be deployed to any 3rd party or proprietary appliance.
