About this Document

This manual describes the overview of the various functionalities of this product, and the information you need to get it ready for operation. It is intended for those who are:
- responsible for installing, administering and troubleshooting this system or Information Technology professionals.
- assumed to be qualified in the servicing of computer equipment, such as professional system integrators, or service personnel and technicians.

Icon Descriptions

The icons are used in the manual to serve as an indication of interest topics or important messages. Below is a description of these icons:

- **Note or Information**: This mark indicates that there is a note of interest and is something that you should pay special attention to while using the product.
- **Warning or Important**: This mark indicates that there is a caution or warning and it is something that could damage your property or product.

Online Resources and Technical Support

To obtain additional documentation resources and software updates for your system, please visit the [Lanner Download Center](#). For certain categories of documents, please register for a Lanner Account at [Lanner’s official website](#), in order to access published documents and downloadable resources.

In addition to contacting your distributor or sales representative, you could visit our [Lanner Technical Support](#), to fill in a support ticket to our technical support department.

Copyright and Trademarks

This document is copyrighted © 2024. All rights are reserved. The original manufacturer reserves the right to make improvements to the products described in this manual at any time without notice.
No part of this manual may be reproduced, copied, translated or transmitted in any form or by any means without the prior written permission of the original manufacturer. Information provided in this manual is intended to be accurate and reliable. However, the original manufacturer assumes no responsibility for its use, nor for any infringements upon the rights of third parties that may result from such use.

Documentation Feedback

Your feedback is valuable to us, as it will help us continue to provide you with more accurate and relevant documentation. To provide any feedback, comments or to report an error, please email to [contact@lannerinc.com](mailto:contact@lannerinc.com). Thank you for your time.

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution

- Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate this equipment.
- This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Note

1. An unshielded-type power cord is required to meet FCC emission limits and to prevent interference to the nearby radio and television reception. It is essential that only the supplied power cord be used.
2. Use only shielded cables to connect I/O devices to this equipment.
3. Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Important

1. Operations in the 5.15-5.25GHz band are restricted to indoor usage only.
2. This device meets all the other requirements specified in Part 15E, Section 15.407 of the FCC Rules.
Safety Guidelines

Follow these guidelines to ensure general safety:

- Keep the chassis area clear and dust-free during and after installation.
- Do not wear loose clothing or jewelry that could get caught in the chassis. Fasten your tie or scarf and roll up your sleeves.
- Wear safety glasses if you are working under any conditions that might be hazardous to your eyes.
- Do not perform any action that creates a potential hazard to people or makes the equipment unsafe.
- Disconnect all power by turning off the power and unplugging the power cord before installing or removing a chassis or working near power supplies.
- Do not work alone if potentially hazardous conditions exist.
- Never assume that power is disconnected from a circuit; always check the circuit.

Consignes de sécurité

Suivez ces consignes pour assurer la sécurité générale :

- Laissez la zone du châssis propre et sans poussière pendant et après l’installation.
- Ne portez pas de vêtements amples ou de bijoux qui pourraient être pris dans le châssis. Attachez votre cravate ou écharpe et remontez vos manches.
- Portez des lunettes de sécurité pour protéger vos yeux.
- N’effectuez aucune action qui pourrait créer un danger pour d’autres ou rendre l’équipement dangereux.
- Coupez complètement l’alimentation en éteignant l’alimentation et en débranchant le cordon d’alimentation avant d’installer ou de retirer un châssis ou de travailler à proximité de sources d’alimentation.
- Ne travaillez pas seul si des conditions dangereuses sont présentes.
- Ne considérez jamais que l’alimentation est coupée d’un circuit, vérifiez toujours le circuit. Cet appareil génère, utilise et émet une énergie radiofréquence et, s’il n’est pas installé et utilisé conformément aux instructions des fournisseurs de composants sans fil, il risque de provoquer des interférences dans les communications radio.

Lithium Battery Caution

- There is risk of Explosion if Battery is replaced by an incorrect type.
- Dispose of used batteries according to the instructions.
- Installation only by a skilled person who knows all Installation and Device Specifications which are to be applied.
- Do not carry the handle of power supplies when moving to another place.
- Please conform to your local laws and regulations regarding safe disposal of lithium BATTERY.
- Disposal of a battery into fire or a hot oven, or mechanically crushing or cutting of a battery can result in an explosion.
- Exposing a battery to high temperatures may cause it to explode or leak flammable substances.
- A battery exposed to extremely low air pressure may explode or leak flammable liquids or gases.

Avertissement concernant la pile au lithium

- Risque d’explosion si la pile est remplacée par une autre d’un mauvais type.
- Jetez les piles usagées conformément aux instructions.
- L’installation doit être effectuée par un électricien formé ou une personne formée à l’électricité connaissant toutes les spécifications d’installation et d’appareil du produit.
- Ne transportez pas l’unité en la tenant par le câble d’alimentation lorsque vous déplacez l’appareil.

Operating Safety

- Electrical equipment generates heat. Ambient air temperature may not be adequate to cool equipment to acceptable operating temperatures without adequate circulation. Be sure that the room in which you choose to operate your system has adequate air circulation.
- Ensure that the chassis cover is secure. The chassis design allows cooling air to circulate effectively. An open chassis permits air leaks, which may interrupt and redirect the flow of cooling air from internal components.
- Electrostatic discharge (ESD) can damage equipment and impair electrical circuitry. ESD damage occurs when electronic components are improperly handled and can result in complete or intermittent failures. Be sure to follow ESD-prevention procedures when removing and replacing components to avoid these problems.
- Wear an ESD-preventive wrist strap, ensuring that it makes good skin contact. If no wrist strap is available, ground yourself by touching the metal part of the chassis.
- Periodically check the resistance value of the antistatic strap, which should be between 1 and 10 megohms (Mohms).
Sécurité de fonctionnement

- L’équipement électrique génère de la chaleur. La température ambiante peut ne pas être adéquate pour refroidir l’équipement à une température de fonctionnement acceptable sans circulation adaptée. Vérifiez que votre site propose une circulation d’air adéquate.
- Vérifiez que le couvercle du châssis est bien fixé. La conception du châssis permet à l’air de refroidissement de bien circuler. Un châssis ouvert laisse l’air s’échapper, ce qui peut interrompre et rediriger le flux d’air frais destiné aux composants internes.
- Portez un bracelet anti-ESD et veillez à ce qu’il soit bien au contact de la peau. Si aucun bracelet n’est disponible, reliez votre corps à la terre en touchant la partie métallique du châssis.
- Vérifiez régulièrement la valeur de résistance du bracelet antistatique, qui doit être comprise entre 1 et 10 mégohms (Mohms).

Mounting Installation Precaution

The following should be put into consideration for rackmount or similar mounting installations:

- Do not install and/or operate this unit in any place that flammable objects are stored or used in.
- The installation of this product must be performed by trained specialists; otherwise, a non-specialist might create the risk of the system’s falling to the ground or other damages.
- Lanner Electronics Inc. shall not be held liable for any losses resulting from insufficient strength for supporting the system or use of inappropriate installation components.
- Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.
- Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of airflow required for safe operation of the equipment is not compromised.
- Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.
- Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.
- Reliable Grounding - Reliable grounding of rack mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips).

Installation & Operation:

- This equipment must be grounded. The power cord for product should be connected to a socket-outlet with earthing connection.
- Suitable for installation in Information Technology Rooms in accordance with Article 645 of the National Electrical Code and NFPA 75.
- The machine can only be used in a restricted access location and must be installed by a skilled person. Les matériels sont destinés à être installés dans des EMPLACEMENTS À ACCÈS RESTREINT.
- This product is intended to be supplied by a Listed Power Adapter or DC power source, rated 12-24Vdc, 17.5-8A minimum, $T_{ma} = 70^\circ C$, and the altitude of operation = 5000m.
- Lanner Electronics Inc. shall not be held liable for any losses resulting from insufficient strength for supporting the system or use of inappropriate installation components.
Electrical Safety Instructions

Before turning on the device, ground the grounding cable of the equipment. Proper grounding (grounding) is very important to protect the equipment against the harmful effects of external noise and to reduce the risk of electrocution in the event of a lightning strike. To uninstall the equipment, disconnect the ground wire after turning off the power. A ground wire is required and the part connecting the conductor must be greater than 4 mm² or 10 AWG.

Consignes de sécurité électrique

► Avant d’allumer l’appareil, reliez le câble de mise à la terre de l’équipement à la terre.
► Une bonne mise à la terre (connexion à la terre) est très importante pour protéger l’équipement contre les effets néfastes du bruit externe et réduire les risques d’électrocution en cas de foudre.
► Pour désinstaller l’équipement, débranchez le câble de mise à la terre après avoir éteint l’appareil.
► Un câble de mise à la terre est requis et la zone reliant les sections du conducteur doit faire plus de 4 mm² ou 10 AWG.

Grounding Procedure for Power Source

► Loosen the screw of the earthing point.
► Connect the grounding cable to the ground.
► The protection device for the power source must provide 30 A current.
► This protection device must be connected to the power source before power.
► The cable should be 16 AWG.

Procédure de mise à la terre pour source d’alimentation

► Desserrez la vis du terminal de mise à la terre.
► Branchez le câble de mise à la terre à la terre.
► L’appareil de protection pour la source d’alimentation doit fournir 30 A de courant.
► Cet appareil de protection doit être branché à la source d’alimentation avant l’alimentation.
► Le câble doit être 16 AWG.

CHAPTER 1: PRODUCT OVERVIEW

The LEC-2290E, a GPU intelligent edge computing appliance with NVIDIA® A2 GPU support, is a robust box PC powered by the Intel® Core™ i7-9700TE (Codename Coffee Lake S) processor.

Key Features

- Intel® Core™ i7-9700TE
- NVIDIA® A2 GPU Card Support
- 2x DDR4 2133/2400 SO-DIMM
- 2x RJ45 GbE LAN, 4x PoE, 4x USB 3.0, 6x COM Ports, 8x DI & 8x DO
- 2x Removable HDD/SSD External Slot w/ RAID, 1x mSATA
- 1x PCIe*16, 1x PCIe*4, 1x Mini-PCIe w/ Nano-SIM, 1x B-Key M.2 w/ Nano-SIM
- Built-in TPM 2.0 & IPMI Support

Package Content

Your package contains the following items:

- 1x LEC-2290E System Unit
- 4x Rubber Foot

Motherboard Information

Block Diagram
The block diagram indicates how data flows among components on the motherboard. Please refer to the following figure for the motherboard’s layout design.
LEC-2290E User Manual

Motherboard Layout

Front View
Rear View
Internal Jumpers and Connector

The pin headers on the motherboard are often associated with important functions. With the shunt (Jumper) pushed down on the designated pins (the pin numbers are printed on the circuit board, surrounding the pin header), certain feature can be enabled or disable. When changing the jumpers, make sure your system is completely turned off.

</table>
CHAPTER 2: HARDWARE SETUP

To reduce the risk of personal injury, electric shock, or damage to the unit, please remove all power connections to completely shut down the device, and wear ESD protection gloves when conducting the steps in this chapter.

Open the Chassis

1. Power off the system and disconnect the power cord. Unscrew the four (4) screws securing the cover.

2. Loosen all the screws and lift the cover chassis up.
Installing Memory Card

The system supports one (1) slot for mSATA memory card. Please follow the steps for installation.

1. Power off the system and open the system chassis cover. Locate the mSATA memory slot on the motherboard.

2. Align the notch of the memory card with the socket key in the pin slot.
3. Insert the memory card pins at 30 degrees into the socket until it is fully seated.

4. Push down on the memory card and secure it with two screws.
Installing System Memory

The motherboard supports two (2) memory slots for DDR4 registered DIMM. Please follow the steps for installation.

1. Power off the system and open the system chassis cover. Locate the memory slots on the motherboard.

2. Align the notch of the module with the socket key in the pin slot.

3. Insert the memory card pins at 30 degrees into the socket until it is fully seated.

4. Push down on the module until the slot latches catches and clicks into place.
Installing 4G Module (Optional)

This system comes with an external M.2 slot, supporting dual SIM design. The following will discuss the installation of 4G module and SIM cards.

To Install the 4G Module:

1. Locate the M.2 slot on the motherboard. Align the notch of the module card with the socket key in the slot, and insert it at 30 degrees into the socket until it is fully seated.
2. Push down on the module and secure it with one (1) screw.

To Install the SIM Cards:

1. Loosen the two (2) screws that secure the tray and draw out the tray by its grip.
2. Slide open the socket cover and lift the cover on its hinges.
3. Insert the SIM card into the slot in the cover with the gold contacts facing down.
4. Push down the cover to close, and the SIM card will come in contact with the metal contacts in the socket. Finally, Slide the socket cover to the Lock position.

The angled corner of the card is positioned as shown in this picture.
Installing IPMI BMC Card (Optional)

IPMI provides better server management, server monitoring, and remote access. IPMI is independent of the system’s CPU operating system via hardware applied directly into the motherboard. Please follow the steps for installation.

1. Power off the system and turn the system upside down. Locate the four (4) screws on the bottom panel.

2. Loosen the screws and lift up to remove, and place it aside. Watch out for the metal pillars on each corner and PCIe pins.

3. Locate the BMC module slot on the motherboard.
4. Align the notch of the module with the socket key in the pin slot.
5. Insert the BMC card pins at 30 degrees into the socket until it is fully seated.

6. Push down on the module until the slot latches catches and clicks into place. Then, secure into place with one (1) screw.
Installing GPU Module (Optional)

LEC-2290E comes with a slot for GPU graphic card expansion. The GPU graphic card requires a rather complex installation process; therefore, the assembly must be handled with care. Please read through the instructions in this section to make sure you have acquired the necessary knowledge and comply with the requirements.

1. The GPU expansion kit will include:
   - 1x NVIDIA® A2 GPU module
   - 2x Swappable fans
   - 1x Screw Pack

2. Power off the system and turn the system upside down. Locate the four (4) screws on the bottom panel.

3. Loosen the four (4) screws and lift up the section to remove. Watch out for the pillar studs on each corner and PCIe pins.
4. Loosen the four (4) screws and open the top chassis.

5. First, remove the casings parts (side part & bottom part). To remove the side part, unscrew the six (6) screws.

To remove the bottom part, unscrew the two (2) screws from the underside.
6. After removing the casing parts, install the swappable fans. Secure the fan with four (4) screws each.

7. Place in the bottom casing part and secure with two (2) screws on the underside.

8. Insert the GPU graphic card. Align with the notch and slide until fully seated.

9. Secure with one (1) screw on the side.
10. Place the fan power cables through the casing side part holes.

11. Gently push the side casing part in place, and secure with six (6) screws.

12. Insert the fan power cables into the connectors.
13. Place the top chassis back and secure with four (4) screws.

14. Insert the bottom panel back, watch out for the PCIe pins and metal pillars. Secure with four (4) screws.
15. The GPU graphic card has been successfully installed.
Installing the Disk Drive(s) (Optional)

The system supports two 2.5” HDD/SSD drive bays, with one 2.5” SSD drive included. The following will discuss disk drive installation procedures.

1. Power off the system and unplug the power cord. Unscrew the two thumbscrews that fix the tray on the system. Pull the drive tray out.

2. Install the disk onto the tray and secure with four (4) screws, two on each side. Make sure the SATA connector faces outwards as shown in the image.

3. Insert the tray into the bay and fasten the two thumbscrews that fix the tray on the system.
Wall-Mounting the System (Optional)

The system can be mounted on a flat surfaced wall. Please take the following into considerations when mounting the system onto the wall.

The wallmount kit contains the following items:
- 1x pair of Wall Brackets
- 6x Screws (for the wall brackets)

1. Invert the system to expose the bottom side. Secure the two wall brackets to the system base using four (4) screws, two (2) per bracket.

2. On the wall, measure the exact place where you want to hang the system and drill four holes.

   NOTE: The demonstrated screw type can fit in general drywall or shelves. Please identify the wall type and select the suitable fixing approach to secure this system to the wall, and consult a qualified trained person if you are unsure.

3. Insert the expansion anchor bolts into the holes.

4. Drive four (4) long screws into the anchoring bolts to secure the system.
Rackmount the System (Optional)

With a rackmount kit, LEC-2290E can be installed into a rack. Please contact Lanner’s sales representative for purchasing the rackmount kit.

The rackmount kit contains the following:
- 2x Rackmount Brackets
- 2x Ear Brackets
- 1x Screws Pack

1. Align the ear brackets to the rackmount brackets and secure using four (4) screws on each side.

2. Next, place the system in the center of the bracket, and secure with four (4) screws on the bottom side.
3. Position the system with its front facing you, gently lift it, and insert it into the rack. Attach the ear brackets to the rack rails using rack-mount screws (not provided).
CHAPTER 3: SOFTWARE SETUP

Entering BIOS

The system has AMI BIOS built-in, with a SETUP utility that allows users to configure required settings or to activate certain system features. Pressing the <Tab> or <Del> key immediately allows you to enter the Setup utility.

**Console Redirection Settings**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Terminal Type**      | VT100 VT100+ VT-UTF8 ANSI | Emulation:  
ANSI: Extended ASCII char set.  
VT100: ASCII char set.  
VT100+: Extends VT100 to support color, function keys, etc.  
VT-UTF8: Uses UTF8 encoding to map Unicode chars onto 1 or more bytes. |
| **Bits per second**    | 9600 19200 38400 57600 115200 | Selects serial port transmission speed. The speed must be matched on the other side. Long or noisy lines may require lower speeds. |
| **Data Bits**          | 7 8              | Data Bits                                                                                                                                 |
| **Parity**             | None Even Odd Mark Space | A parity bit can be sent with the data bits to detect some transmission errors.  
Even: parity bit is 0 if the num of 1's in the data bits is even.  
Odd: parity bit is 0 if num of 1's in the data bits is odd.  
Mark: parity bit is always 1.  
Space: Parity bit is always 0.  
Mark and Space Parity do not allow for error detection. They can be used as an additional data bit. |
| **Stop Bits**          | 1 2              | Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit. |
### Flow Control

<table>
<thead>
<tr>
<th>None</th>
<th>Hardware RTS/CTS</th>
</tr>
</thead>
</table>

Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a ‘stop’ signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals.

### VT-UTF8 Combo Key Support

<table>
<thead>
<tr>
<th>Disabled</th>
<th>Enabled</th>
</tr>

RAID 0/1 Setup

RAID, the abbreviation of Redundant Array of Independent Disks, is a technological combination of multiple physical disk drives to appear as one single logical storage unit on the operating system layer. RAID-0 requires at least two physical disk drives and the total capacity is the sum of all available storage devices. RAID-1 requires two or more physical disk drives to operate. Current BIOS default setting is to disable RAID FW function, please follow setup steps below to enable RAID 0 features.

1. Select the Chipset menu item from the BIOS setup screen, and select PCH-IO Configuration.

![PCH-IO Configuration](image1)

2. Select SATA And RST Configuration.

![SATA And RST Configuration](image2)
3. Select **SATA Mode Selection**.

4. Select **Intel RST Premium With Intel Optane System Acceleration**.
5. Then Select Save & Exit Menu item and select **Yes** to **Save configuration and reset**. RAID 0 function has been enabled.

### RAID-0 Setup

1. Select `<CTRL-I>` to enter Configuration Utility...

2. On the **MAIN MENU**, select 1. **Create RAID Volume**.
3. In the **CREATE VOLUME MENU**, select the disk to use in creating the volume.

4. Insert **Strip Size** values.

5. Insert **Capacity** values.
6. Select **Y** to create this volume.

7. Select **Y** to exit.

**RAID-1 Setup**

1. Select `<CTRL-I>` to enter Configuration Utility...
2. On the **MAIN MENU**, select **1. Create RAID Volume**.

3. In the **CREATE VOLUME MENU**, Select **Name**.

4. Enter **RAID Level** value.
5. Select the Disks to use in creating the volume.

6. Enter Capacity value.
7. Select **Create Volume**. Select Y to create this volume.

Reset RAID Disk

1. Select `<CTRL-I>` to enter Configuration Utility...

2. In the MAIN MENU, select 3. Reset Disks to Non-RAID.
3. Select the disks that should be reset. Select Y to reset RAID data.
Security

Select the Security menu item from the BIOS setup screen to enter the Security Setup screen. Users can select any of the items in the left frame of the screen.

<table>

<tr>
<td>Boot mode select</td>
<td>[UEFI]</td>
<td>Select boot mode for LEGACY or UEFI. (*1) LEB-2291C SKU default setting (*2) LEB-2291B SKU default setting</td>
</tr>
</tbody>
</table>
- Choose boot priority from boot option group.
- Choose specifies boot device priority sequence from available Group device.
Save and Exit Menu

Select the Save and Exit menu item from the BIOS setup screen to enter the Save and Exit Setup screen. Users can select any of the items in the left frame of the screen.

- **Discard Changes and Exit**
  Select this option to quit Setup without saving any modifications to the system configuration. The following window will appear after the “Discard Changes and Exit” option is selected. Select “Yes” to Discard changes and Exit Setup.

- **Save Changes and Reset**
  When Users have completed the system configuration changes, select this option to save the changes and reset from BIOS Setup in order for the new system configuration parameters to take effect. The following window will appear after selecting the “Save Changes and Reset” option is selected. Select “Yes” to Save Changes and reset.
■ Restore Defaults

Restore default values for all setup options. Select “Yes” to load Optimized defaults.

PS: The items under Boot Override may not be the same as the image above as it should depend on the actual devices connected to the system.
Command Line Configuration

You can configure the value of voltage, power on delay, DI/DO and others on LEC-2290E via the MCU command line. Below are the requirements to enable the command line:

1. Host communication interface: COM#7 (RS-232)
2. Support baud rate: 57600/8N1

Use below formula to set/get your command line:

*GET VariableName*

*SET VariableName value*

Example

1. The minimum voltage for startup  
   Setting: 6V(6000mV)

   SET STARTUP_VOLTAGE 6000  
   OK
   GET STARTUP_VOLTAGE  
   STARTUP_VOLTAGE = 6000

2. The delay time for POWERON_DELAY state  
   Setting: 4 S

   SET POWERON_DELAY 4  
   OK
   GET POWERON_DELAY  
   POWERON_DELAY = 4

3. Device ID

   GET DEVICE_ID  
   DEVICE_ID = LEC-2290_N

4. Firmware Version

   GET VERSION  
   VERSION = 0.07B

5. Ignition state (Read only)

   GET IGNITION  
   IGNITION = 0

   response massage (0: Ignition off / 1: ignition on)

6. Control the ON/OFF of each POE port

   SET DIGITAL_POE 1  
   OK
   GET DIGITAL_POE  
   DIGITAL_POE = 1

   POE1/bit0 = 1
   POE2/bit1 = 2
   POE3/bit2 = 4
   POE4/bit3 = 8

   To achieve POE1~4 enable, please entry value setting at 15.

<table>
<thead>

NVIDIA EGX Installation Guide

Enable internal HDMI

Please enter BIOS Setup Menu (<Delete> or <tab>), CHIPSET>SYSTEM Agent (SA) Configuration> Graphics Configuration>Primary Display set to IGFX.
Installing the Ubuntu Operating System

```
sudo nano /etc/modprobe.d/blacklist-nouveau.conf
```

Insert the following:

```
blacklist nouveau
options nouveau modeset=0
```

Now execute the below:

```
sudo update-initramfs -u
sudo reboot
```

Installing Docker-CE

```
sudo apt-get update/nsudo apt-get install -y apt-transport-https ca-certificates curl gnupg-agent software-properties-common
curl -fsSL https://download.docker.com/linux/ubuntu/gpg | sudo apt-key add -
sudo apt-key fingerprint 0EBFCD8B
sudo add-apt-repository "deb [arch=amd64] https://download.docker.com/linux/ubuntu $(lsb_release -cs) stable"
sudo apt-get update
sudo apt-get install -y docker-ce=5:18.04.5-3~ubuntu-bionic docker-ce-cli=5:18.04.5-3~ubuntu-bionic containerd.io
```

Verify that Docker Engine - Community is installed correctly by running the hello-world image:

```
sudo docker run hello-world
```

Installing Kubernetes

```
sudo systemctl start docker &
sudo systemctl enable docker
sudo apt-get update &
sudo apt-get install -y apt-transport-https curl
curl -s https://packages.cloud.google.com/apt/doc/apt-key.gpg | sudo apt-key add -
sudo mkdir -p /etc/apt/sources.list.d/
sudo nano /etc/apt/sources.list.d/kubernetes.list
```

Add the following lines in kubernetes.list and save the file:

```
deb https://apt.kubernetes.io/ kubernetes-xenial main
```

Now execute the below:

```
sudo apt-get update/nsudo apt-get install -y kubelet=1.27.5-00 kubectl=1.27.5-00 kubeadm=1.27.5-00
sudo apt-mark hold kubelet kubeadm kubectl
```
Initializing the Kubernetes cluster to run as master

```bash
sudo swapoff -a
sudo nano /etc/fstab
```

Add a `#` before all the lines that start with `/swap`. `#` is a comment and the result should look something like this:

```bash
# /swap.img
```

Execute the following command:

```bash
sudo kubeadm init --pod-network-cidr=192.168.0.0/16
```

Following the instructions in the output, execute the commands as shown below:

```bash
mkdir -p $HOME/kube
sudo cp -i /etc/kubernetes/admin.conf $HOME/.kube/config
sudo chown $(id -u):$(id -g) $HOME/.kube/config

kubectl apply -f https://docs.projectcalico.org/v3.11/manifests/calico.yaml

kubectl get pods --all-namespaces
```

Output:

```
NAMESPACE       NAME            READY   STATUS       RESTARTS AGE
kube-system     calico-kube-controller-78m064fx-cd3j  6/6     Pending      0          8s
kube-system     calico-nodes-zzyw9  0/1     Init:0/0      0          8s
kube-system     calico-nodes-y4zmd  0/1     Running      0          8s
kube-system     calico-nodes-geqtc  0/1     Running      0          8s
kube-system     etcd-laner  1/1     Running      0          1s
kube-system     kubeproxy-laner  1/1     Running      0          1s
kube-system     kube-proxy-4dp3o  1/1     Running      0          8s
kube-system     kubeproxy-laner  1/1     Running      0          8s
```

Execute the below:

```bash
kubectl get nodes
kubectl taint nodes --all node-role.kubernetes.io/master:
```

Installing Helm

```bash
sudo wget https://get.helm.sh/helm-v3.1.0-linux-amd64.tar.gz
sudo tar -zxf helm-v3.1.0-linux-amd64.tar.gz
sudo mv linux-amd64/helm /usr/local/bin/helm
```

Installing the GPU Operator

```bash
helm repo add nvidia https://nvidia.github.io/gpu-operator
helm repo update
helm install --version 1.1.7 --devel nvidia/gpu-operator --wait --generate-name

kubectl get pods --all-namespaces | grep -v kube-system
```
Validating the Installation

Example 1: nvidia-smi

```
$ kubectl run nvidia-smi --rm -t --restart=Never --image=nvidia/cuda:11.0.3-base-ubuntu18.04 --limits=nvidia.com/gpu=1 --nvidia-smi
```

Output:

```
NAME                READY   STATUS      RESTARTS AGE
nvidia-smi-9jy5r     1/1      Running   0          2m
nvidia-smi-kjk0m     1/1      Running   0          1m
```

Example 2: CUDA-Vector-Add

```
sudo nano cuda-samples.yaml
```

Add the below and save it as cuda-samples.yaml:

```
apiVersion: v1
crds: {}
metadata:
  name: cuda-vector-add
spec:
  version: "0.1.0"
containers:
- name: cuda-vector-add
  image: "nvidia/cuda-vector-add:0.1"
```

Run the below command to create a sample gpu pod:

```
sudo kubectl apply -f cuda-samples.yaml
```

Output:

```
NAME                READY   STATUS      RESTARTS AGE
cuda-vector-add-2thq2 1/1      Running   0          2m
```

APPENDIX B: CONNECT TO DC POWER

1. Make sure your system is turned off.

2. Follow the wiring definition and illustration below to connect the power source to the system through the 4-pin terminal block connector as DC Input. Connect the two Power Wires to the Terminal Block (supplied along with the system) by respectively inserting the red wire to the Positive contact, the other wire to the Negative contact, and then secure them onto the terminal block.

3. Follow the wiring definition and illustration below to connect the power source to the PCIe card through the 4-pin terminal block connector as DC Input. Connect the two Power Wires to the Terminal Block (supplied along with the system) by respectively inserting the red wire to the Positive contact, the other wire to the Negative contact, and then secure them onto the terminal block.
APPENDIX C: TERMS AND CONDITIONS

Warranty Policy

1. All products are under warranty against defects in materials and workmanship for a period of one year from the date of purchase.
2. The buyer will bear the return freight charges for goods returned for repair within the warranty period; whereas the manufacturer will bear the after-service freight charges for goods returned to the user.
3. The buyer will pay for the repair (for replaced components plus service time) and transportation charges (both ways) for items after the expiration of the warranty period.
4. If the RMA Service Request Form does not meet the stated requirement as listed on “RMA Service,” RMA goods will be returned at customer’s expense.
5. The following conditions are excluded from this warranty:
   - Improper or inadequate maintenance by the customer
   - Unauthorized modification, misuse, or reversed engineering of the product
   - Operation outside of the environmental specifications for the product.

RMA Service

Requesting an RMA#

1. To obtain an RMA number, simply fill out and fax the “RMA Request Form” to your supplier.
2. The customer is required to fill out the problem code as listed. If your problem is not among the codes listed, please write the symptom description in the remarks box.
3. Ship the defective unit(s) on freight prepaid terms. Use the original packing materials when possible.
4. Mark the RMA# clearly on the box.

Note: Customer is responsible for shipping damage(s) resulting from inadequate/loose packing of the defective unit(s). All RMA# are valid for 30 days only; RMA goods received after the effective RMA# period will be rejected.
# RMA Service Request Form

When requesting RMA service, please fill out the following form. Without this form enclosed, your RMA cannot be processed.

<table>
<thead>
<tr>
<th>RMA No:</th>
